

ERIC ARMSTRONG

Staff Product Manager | Developer Platform | AI-Native Tooling
(662) 417-8780 | ericarmstrong@techsmartl.com | Remote — United States | U.S. Veteran

PROFESSIONAL SUMMARY

Founder-turned-product leader with 20+ years building developer tools, APIs, and AI-powered platforms from zero to production. I have shipped trading algorithms, autonomous AI agent systems, multi-tenant SaaS platforms, password managers, and wireless infrastructure products — not as a manager of those efforts, but as the person who defined what to build, why, and how to measure success. I understand how developers work because I am one. I have designed API surfaces, managed vendor ecosystems, led cross-functional roadmaps, and operated at the intersection of technical depth and strategic clarity. I am now bringing that full-stack product experience to an organization building the platform that powers how the world writes software.

CORE COMPETENCIES

Developer Tools and Workflows	API Design and Platform Thinking	Agentic AI Product Strategy
Roadmap Ownership and Prioritization	Metrics-Driven Decision Making	Cross-Functional Leadership
Vendor and Stakeholder Management	Go-to-Market and Adoption Strategy	Async and Distributed Team Ops

PRODUCT EXPERIENCE

Founder and Chief Product Officer — Tech Smart Inc. — Grenada, MS	2012 – Present
--	----------------

Built and operate a multi-product technology company across SaaS, infrastructure, AI, and developer tooling — defining product strategy, owning roadmaps end-to-end, and shipping production systems.

- Defined and shipped OMEGA v2 — a multi-exchange algorithmic trading platform with a TradingView webhook API, autonomous agent runtime (Moby/OpenClaw), pair inference engine, real-time signal processing, and safety constraint layer. Personally authored the product specification, API contract, and go-live criteria.
- Designed SaaSCommandTrade, a three-tier subscription platform (\$49/\$149/\$299/mo) built on proprietary trading engines. Owned the full product brief: market positioning, feature differentiation per tier, pricing strategy, and upsell architecture.
- Architected and shipped MyLock360 — a standalone AES-256-GCM password manager with Free, Pro, and Ecosystem tiers (free for token holders). Defined the feature set, data model, platform strategy (Electron/Windows-first), and integration roadmap with the broader product ecosystem.
- Built and deployed techsmartinc.com and rentsmartinc.com on Cloudflare Workers with Supabase data backend. Established a full subdomain product map (reset, trade, vault, rwp, game, book, cloud, rent, shop, learn) as a scalable platform architecture.
- Defined the RWP (Real Estate with Purpose) two-token ecosystem product spec: 21M supply utility token (RWP) with tenant incentive mechanics, and BDC (1B supply, Layer 9 blockchain bridge at 1,000 BDC = 1 RWP). Wrote the full economic model, use-case matrix, and holder benefit structure.
- Designed and shipped the Body Reset App product ladder: free Commander HQ tier, \$0.99 Stripe-gated public lite, and \$9.99–\$14.99/mo Pro with AI coach — defining pricing, onboarding flows, and retention mechanics.
- Operate a three-tier AI command chain (Commander → Claude as OC/Strategist → Moby as autonomous agent) as a live internal product for agentic workflow orchestration — directly analogous to GitHub Copilot agent management at scale.
- Managed the full Cloud Nexus LLC wireless infrastructure product: ISP vendor negotiations, coverage expansion roadmap, service-level definitions, and client-facing SLA design across rural Mississippi markets.

Game Product Lead — Below-Day — Lion Investors Inc.	2023 – Present
---	----------------

Sole product owner for a post-apocalyptic blockchain NFT survival game with a completed Epic Games JV pitch and full Game Bible.

- Authored the complete Below-Day Game Bible: post-apocalyptic lore (ARES-9 rogue AI), 4 player classes, a 5-tier NFT economy, raid system, and BDC token integration — defining every feature, balance mechanic, and monetization layer.
- Designed the full 5-tier NFT product economy including asset scarcity model, in-game utility per tier, secondary market mechanics, and bridge to the BDC token for cross-platform liquidity.
- Produced and delivered an executive-level JV pitch package to Epic Games, including product overview, market positioning, revenue projections, and technology stack alignment.

Network Manager and IT Product Lead — Life Help Mental Health Facility	2008 – 2013
--	-------------

Owned the full network infrastructure product across 20+ sites and 8 counties — from problem discovery through vendor procurement, solution design, funding acquisition, and rollout.

- Identified a critical network bottleneck triggered by an EMR platform upgrade; designed the solution architecture, selected vendors, and executed a full infrastructure upgrade across all 20+ locations.
- Secured 100% of upgrade funding through the Universal Service Fund (USAC/E-Rate program) — saving the organization thousands annually in maintenance fees. Wrote and won the grant application as product owner of the initiative.
- Served as the single point of contact and decision-maker for all network incidents, vendor accountability, and change management across a geographically distributed enterprise.

IT/Network Product Specialist — North Central Planning and Development District	Feb 2021 – Sep 2021
---	---------------------

- Delivered IT infrastructure services and network solutions to 8 county and city government agencies, including all first responder systems — owning scope definition, vendor coordination, and delivery accountability.
- Maintained NOC-level incident documentation, change logs, and resolution tracking consistent with enterprise operational standards.

EDUCATION

B.A.S.	Business and Organizational Management — Mississippi Valley State University GPA: 3.66
---------------	--

A.A.S.	Computer Programming — Holmes Community College GPA: 3.1 Java, C++, COBOL, RPG, Visual Basic
---------------	--

SHIPPED PRODUCTS AND PLATFORMS

OMEGA v2	Multi-exchange algorithmic trading platform with webhook API, agentic runtime, and real-time signal engine — live on Coinbase and Alpaca
SaaSCommandTrade	Three-tier SaaS subscription platform on proprietary trading engines with structured upsell architecture
MyLock360	AES-256-GCM password manager with tiered access model and ecosystem token integration
RWP Ecosystem	Two-token real estate incentive system (21M RWP + 1B BDC) with tenant mechanics and REIT roadmap

Below-Day	Blockchain NFT survival game with 5-tier economy, 4 player classes, and Epic Games JV pitch package
Body Reset App	Three-tier consumer health app with Stripe gating, AI coach layer, and mobile-first architecture
Cloud Nexus	Wireless ISP infrastructure product covering rural Mississippi with SLA-backed service tiers

TECHNICAL AND PRODUCT SKILLS

API and Platform	REST API design, webhook architecture, multi-tenant SaaS, token-gated access, agent orchestration
Developer Tools	GitHub, Git workflows, CI/CD concepts, Python, JavaScript, Cloudflare Workers, Supabase
AI and Agents	Agentic system design, LLM orchestration, autonomous agent runtimes, prompt engineering at scale
Product Methods	Roadmap ownership, OKRs, metrics-based prioritization, go-to-market strategy, stakeholder comms
Communication	Executive briefings, JV pitch packages, async distributed team ops, technical writing
